## DETAILED ACTION

### ***Allowable Subject Matter***

1. Claims 1, 2, 4-11, 13, 16, 19-32, and 34-47 are allowed.

The following is an examiner's statement of reasons for allowance: Regarding **claim 1, Kim et al 20030032389**, discloses a method of operating a mobile terminal, the method comprising: accessing a service station via a bi-directional network; selecting an item on a service menu included in the service station and corresponding to a broadcast service relating to the corresponding broadcast service from the service station; using the received channel parameter data to open a communications channel.

The instant invention discloses a mobile station accessing a service portal via a bi-directional network; using the received channel parameter data and the service information data to open a broadcast communications channel via a broadcast network separate from the bi-directional network; and receiving broadcast data for the broadcast service through the broadcast communications channel. The above novel features in combination with other limitations of the claim are neither taught, suggested, nor made obvious by Kim et al or any other prior art of record. Claims 2, 4-9, and 40 are allowable by virtue of their dependency on claim 1.

Regarding **claim 10, Kim et al 20030032389** discloses a mobile terminal comprising: means for accessing a service station via a bi-directional network; means for allowing selection of an item on a service menu included in the service station and corresponding to a broadcast service; means for receiving from the service station channel parameter data relating to the broadcast service; means for opening a

communications channel using the channel parameter data; and means for receiving broadcast data for the broadcast service through the communications channel.

The instant invention discloses a mobile terminal comprising: means for opening a broadcast communications channel via a broadcasting network separate from the bi-directional network by using the channel parameter data and the service information data, and means for receiving broadcast data for the broadcast service through the broadcast communications channel. The above novel features in combination with other limitations of the claim are neither taught, suggested, nor made obvious by Kim et al or any other prior art of record.

Claims 11, 13, 16, 41, and 43-46 are allowable by virtue of their dependency on claim 10.

Regarding **claim 19, Kim et al 20030032389** discloses a method of operating a server, the method comprising: storing data relating to channel parameters of one or more broadcast services; receiving a request from a user terminal for accessing a service portal stored in the server over a bi-directional network: providing over the bi-directional network one or more selectable items on a service menu included in the service portal, each item relating to a broadcast service;

The instant invention disclose in response to the selection of an item from the user terminal, sending channel parameter data relating to the corresponding broadcast service to the user terminal, wherein the channel parameter data includes one or more instructions to access a broadcast communications channel via a broadcast network separate from the bi-directional network. The above novel features in combination with

other limitations of the claim are neither taught, suggested, nor made obvious by Kim et al or any other prior art of record.

Claims 20-23 and 47 are allowable by virtue of their dependency on claim 19.

Regarding **claim 24**, **Kim et al 20030032389** discloses an apparatus, the apparatus being configured to: to store data relating to channel parameters of one or more broadcast services; to provide one or more selectable items on a service menu, each item relating to a broadcast service; and to be responsive to the selection of an item by a remote terminal to send channel parameter data relating to the corresponding broadcast service to the remote terminal, wherein the apparatus is a service portal.

The instant invention discloses wherein the channel parameter data includes one or more instructions to access a broadcast communications channel via a broadcast network separate from the bi-directional network. The above novel features in combination with other limitations of the claim are neither taught, suggested, nor made obvious by Kim et al or any other prior art of record.

Claims 25-28 are allowable by virtue of their dependency on claim 24.

Regarding **claim 29**, **Kim et al 20030032389**, A system comprising a service portal accessible via a bi-directional network by a mobile terminal, the service portal being arranged to provide over the bi-directional network a service menu comprising one or more items each corresponding to a broadcast service; the mobile terminal being arranged for allowing selection of one of the items over the bi-directional network; the service portal being responsive to an item selection to send to the mobile terminal channel parameter information via the bi-directional network, the channel parameter

information relating to the corresponding broadcast service; the mobile terminal being arranged for receiving service information data relating to the corresponding broadcast service.

The instant invention discloses the mobile terminal being arranged to use the channel parameter information and the service information to open a broadcast communications channel via a broadcast network separate from the bi-directional network, and to receive broadcast data for the broadcast service through the broadcast communications channel. The above novel features in combination with other limitations of the claim are neither taught, suggested, nor made obvious by Kim et al or any other prior art of record.

Regarding **claim 30, Kim et al 20030032389** discloses a method of operating a system comprising a service portal and a mobile terminal, the method comprising: accessing the service portal from the mobile terminal via a bi-directional network; providing a service menu comprising one or more items each corresponding to a broadcast service; using the mobile terminal to select one of the items; sending channel parameter information from the service portal to the mobile terminal over the bi-directional network, the channel parameter information relating to the broadcast service.

The instant invention discloses at the mobile terminal, using the received channel parameter information to open a broadcast communications channel via a broadcast network separate from the bi-directional network; and at the mobile terminal, receiving broadcast data for the broadcast service through the broadcast communications channel. The above novel features in combination with other limitations of the claim are

neither taught, suggested, nor made obvious by Kim et al or any other prior art of record.

Regarding **claim 31**, Kim discloses an apparatus configured: to access a service portal via a bi-directional network; to allow selection of an item on a service menu included in the service portal and corresponding to a broadcast service; to receive from the service portal channel parameter data relating to the broadcast service the channel parameter data being received via the bi-directional network; to receive service information data relating to the broadcast service.

The instant invention discloses the apparatus configured to open a broadcast communications channel via a broadcast network separate from the bi-directional network by using the channel parameter data and the service information; and to receive broadcast data for the broadcast service through the broadcast communications channel, wherein the apparatus is a mobile terminal. The above novel features in combination with other limitations of the claim are neither taught, suggested, nor made obvious by Kim et al or any other prior art of record.

Claims 32, 34-39, and 42 are allowable by virtue of their dependency on claim 31.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
